

Annunciator Exchange

model AM-10

The AM-10 is a rugged, efficient and modern annunciator exchange for magneto telephones that replaces the TCA 3352 type of Multiway Telephone Annunciator of 25 years vintage. As a radial hub, the AM-10 can form a practical and economic network in critical areas. It's capability to link long distances through heavy interference makes it ideal for communication with LC Gates and similar railway locations.

Models AM-5, AM-10 and AM-15 can handle 5, 10 and 15 telephones respectively.

Manufactured by the same unit that has produced over 50,000 magneto telephones for railways in India and abroad, the AM-10 incorporates many useful features such as:

- Built-in magneto telephone instrument.
- Sleek cabinet in ergonomic, aesthetic and compact shape.
- Snug fitting handset cradle and hook switch.
- Siemens type handset with dynamic transducers.
- Heavy duty cords with funnel grommets.
- Hand generator replaced by push-button calling system.
- Toggle switches replaced by micro-switches.
- One-touch operation for calling and selecting extension.
- Sealed relays for all switching activities.
- Dual-colour LEDs to indicate annunciation and line selection.
- Incoming call LED remains on till call is answered.
- Auto call termination when handset is replaced on cradle.
- Solid-state circuitry with modular connectors.
- Electronic ringing system with piezo-ceramic tone callers.
- Complete secrecy for all channels.
- Operator can conference with up to three extensions.
